“ON HAND KEY” PROJECTS WITH LOCAL TECH SUPPORT

Plastics technology – Automation& Control -Mechanical Design

Juárez, México, Feb 14th, 2020 — Eusebio Martinez, Aidmaster Director, announce to the border industrial community, the local engineering services availability to cover technical requirements for design, development and validation of injection molds, test, assembly and inspection automatic equipment to serve the Plastics, Automotive and Electronic Industry.

Aidmaster Engineering is a local young company focused to meet international quality standards and manufacturing requirements based on people and environment safety ergonomics, manufacturing indicators and metrics. They are always applying high technology resources from their business partners with their own engineering methodologies and their high qualified associates.

Ethics, Equality, Lesson Learned, Continuous Improvement and High-Quality Standards, are the AIDMASTER PERSONAL SEALS over all their engineering projects.

Aidmaster Engineering is ONE OF THE BEST TECHNICAL OPTION and we're always working to be THE BEST COMMERCIAL OPTION.
